

Science - Microhabitats

A **microhabitat** is a small area with different conditions to the surrounding area.

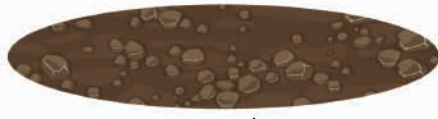

under logs and stones

grass

leaf litter

soil

Minibeasts are small creatures without a backbone.

Minibeasts are small creatures without a backbone.

woodlouse

ladybird

snail

worm

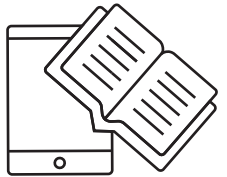

Minibeasts live in microhabitats that provide them with **food** and **shelter**.

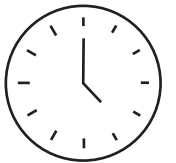

Scientists use **super Science skills** to find answers to questions.
